

FinnSonic Oy's story began in 1979. At that time, the Tolkki brothers in Lahti and Peter Wagner, German-born, founded Oy Ultrasonic Finland Ab. The company's business idea was to manufacture and sell ultrasonic cleaners for the Finnish market and for export. The company operated in Lahti, on Vipusenkatu..

## Strong product development

In the 1980s, there was strong investment in product development. During that time a new generator and a new M-series were launched on the markets for example. One of the first fully automated washing lines was delivered to Aspo Electronic for washing hybrid circuits.

The company was renamed FinnSonic Oy in 1989. Operations grew rapidly and more space was needed. New production facilities were introduced at Parikankatu in early 1990.

In the early 1990's half of the net sales came from Finland the other half from Sweden. Before the turn of the decade, the market area expanded to England, Benelux and Germany.

The ownership changed again when the management acquired the company from Tamro.

## Customized lines as a competitive advantage

In the 21st century, the focus has been on both modular and customer-tailored ultrasonic washing lines. Today, the company is developing not only ultrasonic cleaning solutions for the industry, but also fluorescent penetrant inspection lines mainly for the aviation industry. The reference list contains internationally significant top companies in their respective fields.

## FinnSonic – cleaner, safer, smarter

In 2013, face-to-face ownership was restored when Vesa Nurminen acquired the company from Sentica Partners Oy, which owned the company for seven years. "I am proud of FinnSonic and its personnel. We have grown from a small workshop to a significant global player. About 80% of our net sales are exported. We have gained a solid position on both the industrial ultrasonic washing and FPI inspection sides", says Nurminen, Chairman of the Board.
